/clone="Organ: Developed infloreseence (20cm-long) without rachis; Vector: pSport; Site 1: Sall; Site 2: NoI; An unidirectional cDNA library generated from [Developed infloreseence (20cm-long) without rachis]. cDNA was prepared from polyA+ mRNA using SuperScript Plasmid System Kit (Invitrogen). The double-strand cDNAs were fractionated in a sepharose CL-2B 40cm-columns and fragments sixing between 0.8 and 1.5 KD were directionally cloned into the vector. Details of each source of RNA and library construction can be obtained at http://sucest.lad.ic.unicamp.br/public"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CysValAlaAspIleLysIleGlyAlaIleThrTrpProProSerSerProGluProTyr 120

/lab_host="DH103" - RescueMu Grid L"
/clone_lib="1123 - RescueMu Grid L"
/note="Organ : leaf; Vector: RescueMu (engineered from pBlueScript backbone); Site 1: BamH1; Site 2: BglII;
RescueMu is a 4.9 kb, modified maize Mu transposon designed to allow plasmid rescue from total genomic DNA. Wu elements insert preferentially into transcription units. For more information on RescueMu, go to the web site 'www.rmdb.iastate-edu' and follow the links for 'RescueMu. Grid L was grown in Molokai in 2001. DNA was extracted from leaf strips, double digested using BamHI and BglII, and ligated to form circular plasmids. DH10B cells were transformed and then screened on LB plates with ampicillin."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CA202412 671 bp mRNA linear EST 25-SEP-2003 SCRLFL1009H02.g FL1 Saccharum officinarum cDNA clone SCRLFL1009H02 5', mRNA sequence.

Missouri, Columbia, MO 65211, USA
If you are interested in getting corresponding physical clones, these are publicly available from ZmDB and may be found by BLAST searching at MSL, maizemap.org; ZmDB, www.ramb.iastate.edu, TIGR, www.tigr.org; or NCBI, www.ncbi.nlm.nih.gov. When the source of the maize CDNA sequences is either Virginia Walbot, Stanford or Pat Schnable, Iowa State, then clones may be requested from ZmDB: www.zmdb.iastate.edu.

An unidirectional cDNA library generated from
[Inflorescence at begining of development (Icm-long)].
CDNA was prepared from polyA+ mRNA using SuperScript
Plasmid System Kit (Invitrogen). The double-strand cDNAs
were fractionated in a sepharose CL-28 40cm-columns and
fragments sizing between 0, 8 and 1.5 KD were
directionally cloned into the vector. Details of each
source of RNA and library construction can be obtained at

/note="Organ: Crown and leaf; Vector: pCMV.SPORT6; Crown
(50%) and leaf (50%) tissues from wheat cultivar Norstar
after short exposure times to low temperature in the light
and in the dark. 12 mRNA populations were combined before
constructing the library. The first 6 populations: After 7
days of growth at 2002 from wheat cultivar Norstar after
short exposure times to low temperature in the light and
in the dark. 12 mRNA populations were combined before
constructing the library. The first 6 populations: After 7
days of growth at 20, wheat plants were transferred to 4C
in the light. 1cm crown sections and green leaf tissu were
separature exposure. The last 6 populations: After 7
days of growth at 20C, wheat plants were transferred to 4C in
the dark. 1cm crown sections and green leaf tissu were
separature exposure. The last 6 populations: After 7
days
of growth at 20C, wheat plants were transferred to 4C in
the dark. 1cm crown sections and green leaf tissu were
separately harvested after 1, 3, and 6 hours of low
temperature exposure. First strand synthesis in this
library was done in the presence of methylated dCTP
thereby protecting from internal cleaved with NotI. In
addition, this library used a primer for second strand
synthesis that annealed to an artificial sequence (ANA)

(default parameters) has been run on this sequence. Lucy identified
the region [1,797].
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       oligo) added before first strand synthesis. Therefore when sequences from EST generated from this library will be masked for vector and adaptor sequences, an additional masking srep will have to be included to mask this RNA oligo that is common to all clones (sequence
Pooldeae, Triticeae, Triticum.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 6521795

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: APERCHINGS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: NUMBER: US/09/252,991A

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1404 CGGAAGGAACGCCTTGGTGCCGTTCACCACGCCCAGAAGTTGATGTTCATGATCCACTC 1345

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Keith Weinstock et al

APPLICANT: Keith Weinstock et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICANS

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: 107196.132

CURRENT APPLICATION NUMBER: US/09/248, 796A

CURRENT APPLICATION NUMBER: US 60/074, 725

PRIOR FILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 4664
                                                                                                                                                                                                                                                                                                             2353 CGGTGCCGTC-----CGCGGAGCCCGTGCTCGTGCCGGACGCGCTGCCGGAGTCCG 2303

Patent No. 5866397
GENERAL INFORMATION:
APPLICANT: SCHNIDT, AZRIEL
APPLICANT: RUTLEDGR, SU JANE
TITLE OF INVENTION: TYROSINE PHOSPHATASE
NUMBER OF SEQUENCES: 7
CORRESPONDENCE ADDRESS:
ADDRESSEE: J. MARK HAND - MERCK & CO., INC.

The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polymucleotides. Sequences of the invention are useful in modulating the phytic acid biosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polymucleotides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and raising anti-idiotypic antibodies. The present sequence is maize IPPK DNA

                                                                                                                                                                                                                                                                                              셤
                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polymoclectides. Sequences of the invention are useful in modulating the phytic acid biosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polymucleotides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and raising anti-idiotypic antibodies. The

The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polynucleotides. Sequences of the invention are useful in modulating the phytic acid blosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polymucleotides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that modulate thair activity and raising anti-idiotypic antibodies. The present sequence is maize IPPK DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 41 GlyGluHisGluValAlaPheTyrGluAlaPheSerAlaHisAlaAlaValProAlaArg 60
